TITLE: Preparation of rhenium carbonyl chloride

PERIODICAL: Akademiya nauk SSSR. Izvestiya.. Otdeleniye khimicheskikh nauk, no. 8, 1962, 1321

TEXT: The method of A. N. Nesmeyanov et al. (Zh. neorg. khimii, 4, 249 (1959); ibid., 4, 503 (1959)) was used. ReCl_5 was heated in an autoclave ($p_{\text{H}_2} = 50 \text{ atm}$, $p_{\text{CO}} = 50 \text{ atm}$) for 5.5 hrs at $70-145^\circ\text{C}$ with $\text{Fe}(\text{CO})_5$

dissolved in ether. The total pressure rose to 145 atm during the reaction, falling to 90 atm at 18°C at the end. The grey powder filtered off from the ether was extracted with boiling benzene. The white crystals obtained (30% yield) had m.p. $264-265^\circ\text{C}$ and composition $\text{Re}(\text{CO})_5\text{Cl}$. The compound is soluble in tetrahydrofuran, acetone, and benzene, but insoluble in water. The rhenium carbonyl $\text{Re}_2(\text{CO})_{10}$ could not be prepared in this way.

TITLE: Derivatives of pentacarbonyl manganese.

SOURCE: AN SSSR. Izvestiya. Seriya khimicheskaya, no. 7, 1963, 1348-1350.

TOPIC TAGS: H sub 2 SO sub 4, manganese, Beta-carboalkoxy propionic acid, adipic acid, terephthalic acid, tetrahydrofuran, dioxan, pentacarbonyl manganese.

ABSTRACT: Synthesis and properties of new derivatives are reported which were obtained by the reaction of $\text{NaMn}(\text{CO})_5$ with the acid chlorides of Beta-carboalkoxy propionic acids and the acid chlorides of adipic and terephthalic acid in a tetrahydrofuran medium. The following were obtained: Beta-carbo(methoxy, ethoxy, propoxy)-propionylpentacarbonyl manganese, adipinyl-bis and p-phthaloyl-bis (pentacarbonyl manganese). The first 3 compounds were soluble in the usual organic solvents, the last 2 in dioxan. All decomposed in H_2SO_4 . The last compound yielded p-phenylene-bis (pentacarbonyl manganese) upon heating to 120-125°C. Hydrolysis of Beta-carbomethoxypropionylpentacarbonyl manganese yielded the ketoacid

Card 1/2

ACCESSION NR: AP3009840

Bromination of the former gave bromopentacarbonyl manganese and Beta-carbomethoxy-propionyl bromide which hydrolyzed to succinic acid. Infrared spectra were determined in the 1630-1645 and 2000-2140 cm^{-1} range. Upon heating to 100C CO was incompletely liberated (ketone group in the infrared spectrum), while disintegration with formation of $\text{Mn}_2(\text{CO})_{10}$ was observed above 100C, with the exception of the phthaloyl compound. All reactions were conducted in an inert atmosphere. Yields were 75-92%. Orig. art. has: 6 formulas.

SOURCE: Zhurnal neorganicheskoy khimii, v. 8, no. 8, 1963, 1806-1808.		
TOPIC TAGS: carbonyl, solid carbonyl, molybdenum, manganese cyclopentadienyl-		
ABSTRACT: Authors show the dissociation of solid carbonyl compounds: molybdenum carbonyl/Mo(CO) ₆ and manganese cyclopentadienylcarbonyl/C ₅ H ₅ Mn(CO) ₃ . The thermal decomposition of molybdenum carbonyl vapors Mo(CO) ₆ → Mo + 6CO takes place with an increase of volume six times the original value. A special manometer was used to accurately measure the kinetics of thermal decomposition. It was shown that both reactions of the above compounds follow the first law. The activation energy was calculated from a graph. The value for Mo(CO) ₆ was found to be E = 17.5 kcal/mole and for C ₅ H ₅ Mn(CO) ₃ , E = 17.9 kcal/mole. Orig. art.

TOPIC TAGS: Isomeric transition; tertiary, β -acetylene alcohol; ferrocene

ABSTRACT: The work is an extension of the investigation of A. N. Nesmeyanov, K. N. Anisimov and others (DAN 158, 163, 1964). It was found that the isomerization of the various alcohols in the presence of retarders ferrocene and cyclopentadienylmanganese-tricarbonyl proceeds as follows:

Card 1/2

L-64461-6
ACCESSION NR.: AP5021282

It is concluded that the ionization of tertiary α -ethoxy alcohols $\text{C}_6\text{H}_{11}\text{CH}_2\text{COOMe} \rightarrow \text{C}_6\text{H}_5\text{CH}_2\text{COO}^+$ is the first stage of which is the net loss of an alkanone-like fragment and the second stage of which is the net loss of a $\text{C}-\text{OH}$ bond with the formation of a carbonium ion. The authors thank Yu. N. Sheremet and O. I. Dvorantseva for the determination of IR and UV spectra.

TITLE: Reaction of manganese chloropentacarbonyl with trichlorogermanium
7

SOURCE: AN SSSR. Izvestiya. Seriya khimicheskaya, no. 7, 1965, 1309

TOPIC TAGS: manganese compound, germanium compound, IR spectrum, absorption band

ABSTRACT: Bimetallic compounds of carbonyls of transition metals with group IV metals are obtained by reaction of the sodium salt of the metal carbonyl with the halogenide derivative of a group IV metal. The authors carried out a new reaction of manganese chloropentacarbonyl with trichlorogermanium for the series of metal carbonyls:

$$\text{Cl}_3\text{GeH} + \text{ClMn}(\text{CO})_5 \rightarrow \text{Cl}_3\text{GeMn}(\text{CO})_5 + \text{HCl}$$
The reaction was carried out in tetrahydrofuran with gradual rise in temperature from 20 to 60°C during the course of one hour. The manganesepentacarbonyl-trichlorogermanium, obtained with a 40% yield, is a white crystalline compound with b. p. 168.5 - 169°C, insoluble in water, soluble in petroleum ether, benzene, and other organic solvents, sublimating in vacuum, and stable in air. The infrared spectrum of the compound contained intensive absorption bands in the region characteristic of carbonyl groups bound with metal, 2030 and 2130 cm^{-1} ; bands were present in the region of 400 and 453 cm^{-1} , corresponding to Ge-Cl bonds in compounds with the GeCl_3 groupings. K.ORG: Institute of Heterorganic Compounds AN SSSR (Institut elementoorganicheskikh soyedineniy AN SSSR)TITLE: Antiknock effectiveness of certain organomanganese compoundsSOURCE: Neftekhimiya, v. 5, no. 6, 1965, 892-896TOPIC TAGS: antiknock compound, organomanganese compound, fuel additive

ABSTRACT: The antiknock effectiveness of manganese carbonyl (MC) and of cyclopenta-dienyltricarbonylmanganese⁷(CTM) derivatives was compared with that of CTM and tetraethyllead (TEL). The effectiveness of the individual organomanganese compounds in different concentrations was studied in various fuels by the standard motor method for determining the octane number. It was shown that for a given metal content in the fuel: 1) the antiknock effectiveness of MC in comparison with that of CTM and TEL is as follows: a) In automotive gasolines//A-66 and A-72, lower; b) in a mixture of isoctane (60%) and heptane (40%), nearly the same; c) in the aviation gasoline//B-95/130, lower. 2) The antiknock effectiveness of MC-CTM mixture in B-95/130 gasoline is equal to that of CTM. 3) The antiknock effectiveness of 2[2-(alkoxy)-5-hexen-3-ynyl]cyclopentadienyltricarbonylmanganese depends on the alkoxy group and

TOPIC TAGS: phenyl compound, germanium compound, tin compound, rhenium compound, organotin compound, chemical synthesis, organogermanium compound

ABSTRACT: In this work the authors accomplish the synthesis of compounds with a Ge-Re bond and investigate certain properties of these compounds. Compounds of the type $R_{4-n}Ge[Re(CO)_5]_n$ are produced by the reactions of the appropriate organogermanium halides with the sodium salt of rhenium pentacarbonyl $R_{4-n}GeX_n + nRaRe(CO)_5 \rightarrow R_{4-n}Ge[Re(CO)_5]_n + nNaX$, where $R = C_6H_5$; $X = Br, Cl$; $n = 1, 2$. From this reaction the authors obtained $Ph_3GeRe(CO)_5$ and $Ph_2Ge[Re(CO)_5]_2$ with yields of 87 and 60%, respectively, in the form of colorless crystals stable in air. Both compounds are readily dissolved in polar solvents and in hydrocarbons with heating. By using halides

TITLE: Isotopic exchange of hydrogen atoms of manganese cyclopentadienyltricarbonyl and rhenium cyclopentadienyltricarbonyl in alkaline media

SOURCE: AN SSSR. Izvestiya. Seriya khimicheskaya, no. 5, 1966, 944

TOPIC TAGS: hydrogen, manganese compound, rhenium compound, deuterium, isotopic, isotopic exchange

ABSTRACT: The authors found that manganese cyclopentadienyltricarbonyl (MCT) and rhenium cyclopentadienyltricarbonyl (RCT) enter into the reaction of isotopic exchange of hydrogen under the influence of alkali catalysts. For example, all the hydrogen atoms of the cyclopentadienyl rings of MCT and RCT are replaced for deuterium in the reaction with deuterioethanol in the presence of sodium acetolato. The kinetics of this reaction were studied at 100°C at molar ratios MCT or RCT:C₂H₅OD:NaOAc = 1:1:1. The rate constants of hydrogen exchange under these conditions are 3.6 x 10⁻⁵ sec⁻¹ and 80 x 10⁻⁶ sec⁻¹ for MCT and RCT respectively, i.e., the relative rate of the cyclopentadienyl rings of the rhenium derivative is almost 22 times greater than that of the manganese derivative.

the cyclopentadienyl derivative of manganese. The opposite relationship is observed in acid catalysis, and the exchange capacity of the hydrogen atoms in the cyclopentadienyl rings linked to manganese is higher than in the rhodium compounds. It is concluded that on passing from Mn (an element of period 4) to Re (period 6) of group VII of the periodic system, the reactivity of cyclopentadienyl ligands in acid media decreases, whereas in alkaline media the opposite is observed.

SUB CODE: 07

ABSTRACT: pi-Cyclopentadienyldicarbonylirontrichlorogermane (I) was synthesized by the reaction of pi-cyclopentadienyldicarbonyliron chloride with HGeCl₃.

Compound (I), an air-stable crystalline substance, was also produced in a mixture with pi-Cyclopentadienyldicarbonyliron dichlorogermane (II) in low yield by the action of trichlorogermane upon dimer pi-cyclopentadienyldicarbonyl. The compound (II) was also produced in 85% yield by the reaction of a complex of dioxane and germanium dichloride on dimer pi-cyclopentadienyldicarbonyl.

TITLE: Sound velocity in binary systems with paraffin content

PERIODICAL: Izvestiya vysshikh uchebnykh zavedeniy. Neft' i gaz, no. 2,
1963, 63 - 69

TEXT: A narrow fraction of hard paraffin hydrocarbons (melting point 52.2°C) from Groznyy paraffin crude, was investigated to study structural changes and phase formation in solutions. The sound velocity was measured by an ultrasonic interferometer at a frequency of 4.8 Mc/sec in 6 systems, viz. n-C₇H₁₆ - n-C₁₆H₃₄; n-C₇H₁₆ - paraffin; C₆H₆ - paraffin; n-C₃H₇OH - paraffin; n-C₄H₉OH - paraffin; n-C₈H₁₇OH (secondary) - paraffin; the results were compared with the mutual solubility in the same systems. The system n-heptane - n-hexadecane can be considered as a standard example of simple molecular and structural relations showing a strict additivity of sound velocity in the blend expressed in parts by volume in preference to parts by weight in view of the considerable difference in the components.

TITLE: A Continuous Method of Producing Heat-insulation Plates
From Poroplast ΦC-7 (FS-7)

PERIODICAL: Plasticheskiye massy, 1960, No. 10, p. 26

✓

TEXT: The following deficiencies are noted in the current production of heat-insulation plates: 1) the pressure arising in the pore formation amounts to 0.05 kg/cm^2 . 400-ton presses of the type Π-713 (P-713) with a pressure of 25 kg/cm^2 are, however, being used, which leads to a senseless waste of energy. 2) The presses are hand-operated. The authors propose a continuous method with an АНΠ-1 (АНП-1) apparatus. [Abstracter's Note: This apparatus is not described]. For a plate backing, wrapping paper is rolled onto the conveyer band from a roll, the composition is applied automatically, and again covered with wrapping paper. By the conveyer band, the composition gets into a heating chamber ($140-150^\circ\text{C}$), melts, and foams up under the action of the expanding agent. Facilities to prevent the plates from deforming are provided at this stage. Hardening sets in

ABSTRACT: Investigations are carried out at the Novotul'skiy metallurgical plant on the development of a new technology for the production of steel and pig iron. Interesting work is done on the study of production with technically pure O₂ of Bessemer steel which is in no way inferior to open-hearth metal and of mastering and integrating into the industry a new method of continuous steel casting. Capital investment per ton of yearly yield for top-blown Bessemer shops is almost 50% less than that necessary for open-hearth shop construction. Better mechanical properties were obtained in rolled steel manufactured with continuous casting than in steel rolled from ingots.
